Proiect Baze de Date

Crearea unei baze de date pentru un magazine online Poalelungi Robert-Florin – 1062D Obiectivul proiectului este reprezentat de crearea unei baze de date pentru un magazin online de electronice. Scopul acestei baze de date este de a centraliza activitatea economică a firmei oferind o platformă solidă pentru gestionarea eficientă a informațiilor și optimizarea proceselor operaționale. Baza de date centralizeaza informatiile esentiale pentru buna desfasurare a activitatilor economice ale magazinului, fiind formata din 5 tabele: Produse, Clienti, Departamente, Angajati si Comenzi.

Relatia DEPARTAMENTE - ANGAJATI

Intre tabela DEPARTAMENTE si tabela ANGAJATI exista o legătura de ONE-TO-MANY, deoarece un departament poate avea mai multi angajati dar un angajat poate apartine unui singur departament.

Relatia CLIENTI - COMENZI

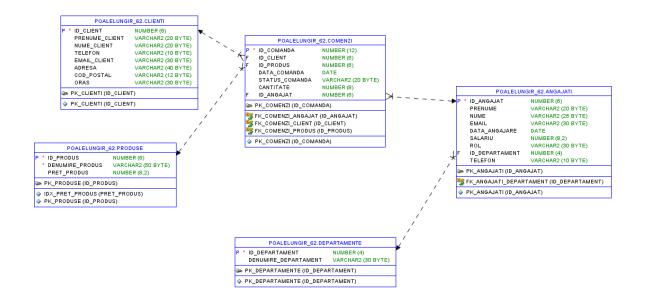

Intre tabela CLIENTI si tabela COMENZI exista o legatura de ONE-TO-MANY, deoarece un client poate plasa mai multe comenzi dar o comanda apartine unui singur client

Relatia PRODUSE - COMENZI

Intre tabela PRODUSE si tabela COMENZI exista o legătură de MANY-TO-MANY, deoarece un produs poate fi inclus in mai multe comenzi si o comanda poate conține mai multe produse.

Relatia ANGAJATI - COMENZI

Intre tabela ANGAJATI si tabela COMENZI exista o legătura de ONE-TO-MANY, deoarece un angajat poate procesa mai multe comenzi dar o comanda este procesata de un singur angajat.

Creare tabele
